

AMENDMENTS TO THE TITLE

Please amend the title as follows:

~~SCALING AND DELIVERING DISTRIBUTING~~ ED NETWORK APPLICATIONS

AMENDMENTS TO THE SPECIFICATION

In paragraph [046] of the originally filed application, please amend as reflected in the following marked-up version of the paragraph:

[046] Figure 4A is a block diagram illustrating both application development and application distribution in a network. Figure 4A illustrates a server 400 that is connected with a node 408. In this example, the application 406 is dynamically distributed between the node 408 and the server 400. The application 406 includes a process portion 404 on the server 400 and a user interface portion 410 on the node 408. The node application 412 is responsible for loading/unloading the application 406 and for allocating resources of the node 408 to the user interface portion 410 of the application 406. The application 406 operates within the node application and although Figure 4A illustrates a single application 406, the node application 412 is able to support multiple applications and will allocate the node resources between those applications.
